

ChE 480

**Senior Unit Operations
Lab
Fall 2013**

Dr. Mechteld Hillsley

111 Fenske Lab
(814) 863-9356
mhillsley@psu.edu

Dr. Manish Kumar

155 Fenske Lab
(814) 865-7519
mkumar.psu@gmail.com

Objectives for this course: students will...

- **Design and execute chemical engineering unit operations** in which the principles of fluid mechanics, heat and mass transfer, separation, reaction kinetics, and process control are applied.
- **Understand and execute the essential theoretical calculations for the experiments.** Heat exchanger calculation, pressure drop through a pipe, McCabe-Thiele calculations, CSTR kinetics.
- **Use theory to understand what data to collect and correctly analyze.** Analysis of real data using the essential theory from previous courses. Make sure to have multiple points collected for formation of an appropriate graph, averaging, statistical analysis, etc.
- **Perform open-ended experiments where decision making is needed to obtain optimal experimental design and results.**
- **Review necessary background and search the literature.** Be able to search the literature and use data collected by colleagues to further understand and improve experiment design, execution and analysis.
- **Follow safe lab practices.** ALWAYS wear goggles, closed-toed shoes, and long pants. Clean your lab area, label all solutions, execute safe work practices in the lab. [loss of 5-10 points on team lab grade for the experiment per offense]
- **Work effectively and professionally in a team.** Organize and manage team and time. Work effectively in a group. Reliable and responsible work practices are expected. [internal team performance evaluations are required]
- **Prepare and present a technically accurate and well-organized presentation.**
- **Communicate technical data and analysis in effective written reports.** Be able to write an effective technical report.

Course information

Time:	Section-1: Tuesday 8:00-2:15pm Section-2: Thursday 8:00-2:15pm
Location:	140 Fenske (Lecture - 8AM); 14 Fenske and 10 Fenske (Lab – immediately following lecture) 140 Fenske (Oral reports – TBD)
Pre-reqs:	Engl 202C, ChE core courses (concurrent)
Required Items:	Individual lab notebook, safety goggles, close-toed shoes, long pants, lab coat (provided) or long sleeves
Texts:	Your own textbooks from previous CHE classes Lab manuals printed from ANGEL Perry's Handbook is on the lab computers McCabe, Smith, and Harriott, <u>Unit Operations in Chemical Engineering</u> . (optional).
ANGEL:	https://cmp.psu.edu

Texts referenced in manuals are on reserve in the Mathematical and Physical Sciences Library in Davey Lab

Teaching assistants:

Yuexiao Shen	HPLC, UF & Gel Electrophoresis	yxs174@psu.edu
Jun Wang	Fluid Flow / HX / Control, Kinetics	jvw5246@psu.edu
Patrick Saboe	Distillation, LLE	pos5030@psu.edu

Office Hours:

Professor Hillsley: TTh 9-2 in the lab, MW 11-12, and by appointment

Professor Kumar: TTh 9-2 in the lab, TWTh 5-6, and by appointment

TAs are available in the lab.

You may come during the other lab section to consult the professor or TA. TAs and the professors may also be contacted via e-mail.

Grading

Grading will consist of the following parts:

Pre-lab calculations	12%
Reports (2 oral, 4 short)	60%
Pre-lab quizzes	12%
Lab notebook grade	4%
Lab grade (safety, lab work, and data processing)	10%
Homework	2%

Grading Scale (rounded grades):

93-100 A	83-86 B	70-75 C
90-92 A-	80-82 B-	60-69 D
87-89 B+	76-79 C+	0-59 F

- **Grades** Professors Hillsley and Kumar give the grades (0-100%) for all graded items. They will take input from the TAs and team evaluations.
- **Team work evaluation.** With each team assignment you will turn in a Team Role Report in which you indicate the roles performed by each team member towards the completed report, including lab work and pre-lab questions. In addition, there will be 3 team dynamics surveys during the semester in which you rate and evaluate your team members. The effort ratings on these evaluations may be used, with instructor input, to adjust the individual grade on each team assignment.
- **Excused absences.** Please discuss any absences prior to the absence with the instructors and your team members. Work for absences with prior approval may be made up. Unexcused absences will result in a 0 (zero) for the lab grade for that day, and may also affect the individual report grade.
- **Late work.** None accepted.
- **Re-writes.** You may rewrite any of your reports. The re-write grade will then be averaged with the original grade. Re-writes must be substantial revisions for an improved grade. Re-writes may be submitted at any time but no later than the last week of class. The last report of the semester is not eligible for a re-write due to time constraints.
- **Pre-read.** Reports may be submitted to instructors 1 week before due-date for a pre-read. The instructor will quickly read over your report and give you feedback on how to improve it. The best way to do this is to bring the report to the instructor and receive oral feedback. If not possible, e-mail submission is also acceptable, but be aware that feedback comments are harder to give via e-mail (less discussion and less detail in comments).
- **Re-grades.** Please submit requests and rationale for re-grades within one week. Small grading errors tend to balance, and so the entire work will be re-graded.

Pre-lab calculations

Pre-lab calculations ensure that you are prepared for the lab (and pre-lab quiz) and allow you to start promptly and thus finish on time. Pre-Lab calculations/research is a team effort, but it is expected that each member of the team understands all parts of the pre-lab. Pre-lab calculations/research must be submitted in person by the entire team to the TA for grading the week before the assigned lab period (in the lab). The TA will grade the calculations. Any errors must be corrected in the lab before the team is dismissed. Groups will arrange a time with the appropriate TA the week before pre-lab calcs are due. Video lectures on each experiment, found on ANGEL, can assist you with the pre-lab preparation. Note that any pre-lab question or calculation is fair game for the pre-lab quiz the following week.

Lab Notebook

The lab notebook is an important part of lab work. Each individual team member will be required to keep a dedicated lab notebook (bound). In addition, for each experiment, one of the lab notebooks will serve as the experiment *master* notebook, into which all the data and observations from the experiment will be compiled at the end of the experiment (see *additional notes for students* for additional information). You must document your work well: label experiments, indicate methods used and deviations from the manual. Document the composition of all solutions made (i.e. mass and volume), measurements made (mass, final volume, etc.) in making solutions, and any other relevant data and observations. You may need to refer back to these notebook entries when problems arise in later calculations, or when unexpected results need to be explained. Poor documentation will result in loss of points. The master lab notes must be initialed by a TA or professor before leaving the lab and an electronic copy must be included in any reports turned in. (see separate handout for more details on lab notebook requirements.)

Lab Grade (includes lab safety, lab work, and data processing).

The lab grade consists of 3 parts. See grading rubric for more details.

- **Lab safety.** Lab safety is very important. All people in the lab are expected to use safe practices. Infractions will result in a deduction from the team lab grade. Serious infractions that result in the student being sent home (ie open toed shoes) will result in major point deductions. Briefly, safety glasses must be worn at all times in the lab, absolutely no food or drink in the lab at any time, gloves must be worn when handling hazardous material, and all solutions must be labeled.
- **Lab work.** Lab work will be graded on preparedness, teamwork within the lab, and effectiveness in the lab.
- **Data processing.** Data processing will be graded on team participation in the processing and/or discussion there off, the efficient work on processing in the lab, and the effective use of the TA for completing the processing. Asking the TA questions is encouraged, but excessive dependence on the TA for processing the data will result in loss of points. The post lab calculations should be done in excel

in a standardized layout. A sample spreadsheet for you to follow may be found on ANGEL.

Safety requirements

All students are expected to understand and do their best to avoid any hazards associated with their particular equipment and experiment. MSDS (Material Safety Data Sheets) for chemicals used in the experiment can be found on ANGEL and in the lab. Students are expected to look these over before coming to the lab. Students must investigate their instruments prior to operation and data collection and report any potential hazards to the TA or professor. If unsafe practice is witnessed, the student will be warned and a lab grade deduction will be made per infraction. If infractions persist, the student and/or team will be dismissed from their particular experiment on that day and a zero grade will be given. All students must observe the following safety precautions:

1. Safety goggles will be worn AT ALL TIMES by all participants. Sunglasses are prohibited.
2. Each student must know the position and operation of fire extinguishers, safety showers, and eye flush fountains. You should be able to determine whether use of this equipment is necessary or not; and if needed, you should be able to use this equipment properly. Please notify your TA or professor immediately in the event of exposure so that we can properly cope with the situation.
3. To avoid chemical burns, skin should be covered as much as possible. Long pants and long sleeves must be worn by all participants. Closed-toed footwear is required. Gloves should be worn when working with hazardous materials.
4. All solutions made in the lab must be labeled. Each experiment has a color tape assigned to it. Use this to label your solutions.
5. Eating, drinking, and smoking are not allowed IN the lab. However, you may take a snack/lunch break (if agreed to by the team) in the student lounge or other suitable area in Fenske in shifts. At least one team member should remain with the experiment at all times.
6. Cellular phones must be turned off because they are distracting and therefore hazardous. Newspapers are not allowed in the lab.

Lab Cleaning (every lab week)

You are not just a user of the 480 lab; you are the “owner”. Without your “responsible” lab manners, we cannot keep the lab in good working conditions. Please clean up your mess and instrument. Report any malfunction to the TA or professor. Your TAs will check waste disposal, chemical storage, work area cleanliness, and instrument conditions after you leave the lab every week. In the event of a problem, your lab grade for that experiment will be reduced 2 points per event.

Significant Figures

It is expected that the appropriate number of significant figures are used in all material turned in. This includes pre-lab and post-lab calculations as well as final reports. Points will be deducted for inappropriate, or lack of, significant figures.

Report Writing

Since this is a writing intensive course, you will be writing a report or making an oral presentation for each experiment performed. All reports will be team efforts. You will write a total of 4 team short reports. In an effort to help improve your writing, these reports will be eligible for an optional re-write. The re-write grade will be averaged with the original grade. Reports are due electronically to the ANGEL drop box by 8 AM on the due date. The due date is generally 11 days after the experiment. Rewrites must be submitted no later than the last week of class. Earlier submission is encouraged. The last written report of the semester is not eligible for a rewrite due to time constraints.

Reports must be submitted electronically, along with a copy of the Excel Data Processing file and 1 scanned copy of signed lab notebook pages.

Excel Data Processing File

All reports must be turned in with an Excel file containing clearly labeled calculations (data processing) and all figures required in the data processing section of the manual. The figures should be publication quality (NOT the default Excel format) with captions and appropriate formatting and enhancements/annotations. All the figures should be grouped on the first sheet of the spreadsheet with reference in the caption as to where the calculations may be found. There is an example Excel spreadsheet found on ANGEL for your reference. Make sure the calculations are clear and easy to follow. They must be correct (and understandable) to get full credit on the graded report. (see additional handout for more information.)

Oral Reports

Each team will present 2 formal oral presentations on experiments performed in the lab. Generally, the reports will be given in room 140 Fenske, one week after the experiment date at 9AM or 10AM. Please consult schedule for exact dates and times for oral reports. The first oral report will be presented to instructors and TAs only. The second oral report may be presented to another team(s) as well as to the instructor(s).

Pre-lab Quiz

At the start of each lab period, you will take a 15 minute pre-lab quiz. This quiz will be taken in room 140 promptly at 8 AM. The purpose of this quiz is to ensure that each member of the group is prepared for the lab experiment to be performed that day. The quiz may cover any of the pre-lab questions for that experiment, as well as the objective

of the lab and an explanation of the data to be collected and analyzed to meet the objective. Video lectures on each experiment available on ANGEL and graded pre-lab calculations can will help you prepare for the quiz.

In Lab Procedure

Upon Arrival

You must must get approval from the TA to start your experiment. Before starting, you should have the following already in your notebook 1) objective of experiment, 2) diagram of experiment, and 3) corrected copy of pre-lab calculations. If you have any questions about the equipment or experiment, ask the TA or instructor before beginning.

Before Leaving the Lab

When you have completed the lab, processed your data, and cleaned up your equipment and glassware; report to the TA or professor to review your data and check out. At this time the TA will sign your lab notes and give you a lab grade. **One copy of the signed lab notes will need to be submitted with your report.** Failure to check out will result in a 5 point deduction from your report grade (as well as deductions from your lab grade).

Plagiarism

Plagiarism will not be tolerated under any circumstances. Reports or presentations containing plagiarism will receive zero points.

References

Please ensure that material obtained from other sources is properly referenced. When quoting specific numbers from a source, an endnote should be used when the data is given. Material taken from other teams, or supplied by the TAs, should also be referenced by author and team name. This is applicable especially for the LLE and HPLC reports. When taking graphics from the web and using it in a presentation, the slide should contain a reference to the source of the material.

Team Work

As the entire semester will be spent working on experiments and reports as a team, effective team work will be of extreme importance. Remember that some team conflict is normal in working towards an effective team (forming, storming, norming, performing), but you want to move to a performing team as quickly as possible. In choosing your team, please keep in mind your individual goals for the course and individual schedules, as these two things tend to present the greatest conflict. Please work towards resolving any conflict as quickly as possible.

Experiments in the lab

The experiments found in the lab are fluid flow (FF), heat exchanger (HX), process control, kinetics, distillation, liquid-liquid extraction (LLE), high performance liquid chromatography (HPLC), and ultrafiltration and gel electrophoresis (UF and gel). Some of these have lengthy pre-lab calculations (FF and kinetics, especially). Some of these experiments will require the full length of the lab (LLE, HPLC, UF and gel, and distillation), and much longer if you come unprepared. Make sure to come very well prepared for these experiments so that you can finish in a timely fashion.
